- ❑ Integrated file compression (Premium Version)
- ❑ FIPS 140-2 certified encryption

ENCRYPTX Software
Protecting over 20 million
devices for users worldwide

PROTECTION IN A FLASH

USB flash drives and removable hard drives create data security concerns for consumers and corporations alike.

Protect against data leaks that can lead to identity theft or the exposure of inappropriate information. Work files, personal financial files, photos, music files, movies and resumes can be easily accessed on unprotected USB flash drives and removable hard drives.

SecurFlash Personal encrypts and protects your data simply and conveniently.

Advanced features in our Premium version include file/folder hiding to ensure your privacy and integrated file compression so that you can store more data on your drives.

EASY: DRAG-AND-DROP

SecurFlash will auto-run on your flash drive. When the SecurFlash window pops up, simply drag and drop your files into the window to encrypt them. To decrypt files simply double click to open or you can Save As the files to another location, such as your PC hard drive.

**PORTABLE: WORK
BETWEEN PCs**

SecurFlash is ideal for protecting your files when you are sharing data between PCs on removable drives. SecurFlash runs from the actual drive, not from the PC, allowing your protected files to be completely portable.

No unique PC administrator rights are required to run SecurFlash.

SECURFLASH PERSONAL

Encryption for USB Flash and Removable Drives

FILE CHANGES AUTOMATICALLY ENCRYPTED

Changes or edits made to files encrypted with SecurFlash are automatically saved and re-encrypted. No need to decrypt to the hard drive, open the file, save changes and re-encrypt. SecurFlash does it automatically.

ADVANCED PRIVACY AND STORAGE FEATURES

SecurFlash Premium enhances data privacy by hiding encrypted files and folders. Keep prying eyes from snooping to see what you have stored on your drive. SecurFlash Premium also adds integrated PK Zip file compression so you can store more data on your drive.

COMPATIBLE WITH DEVICEDEFENDER™

SecurFlash is fully compatible with DeviceDefender™, powerful USB port device control and automatic encryption for all types of PC removable drives. DeviceDefender detects and blocks unauthorized devices and initiates anti-malware/anti-virus scans of media prior to use. SecurFlash allows you to work with DeviceDefender encrypted files on the go.

SECURFLASH VERSIONS

SecurFlash Consumer Edition – Powerful encryption with tamper-resistant password protection, file compression and file hiding (Premium Version) and file and folder auditing.

SecurFlash Corporate Edition – Adds central management and auditing: password enforcement, periodic password change, Single Sign-On integration, full audit tracking, administrator password recovery, and dynamic data revocation of lost or stolen drives.

SecurFlash Government Edition – FIPS 140 certified versions required by government purchasers for Windows 2000, XP and Vista.
